

# Aluminum Partition for Transit Connect

Introducing Malley Industries' latest commercial product: An all-aluminum partition (bulkhead) for the Ford Transit Connect.

Built using durable and lightweight 1/8" aluminum, each partition installs in less than an hour. The end result is a safer work environment for operators which still allows for seat adjustments, and pleasing metallic finish. Each kit also includes full installation instructions, as well as all required parts and components.

The Malley Industries Transit Connect Partition is the perfect compliment to our full line of vehicle storage solutions, including the LINERACK and our upcoming HEADLINERACK storage system.
