

Lowered Floor E-Series Conversions

Adaptive mobility conversions are tailored to the unique needs of each customer. We specialize in lowered floor modifications to the Ford E-150 chassis, which provides 6" of additional headroom for wheelchair accessibility, while maintaining the original look of the vehicle. We carry out custom adaptive mobility conversions on a wide range of vehicle platforms. These include raised roof / raised door side and rear entry lift installations, hand controls, restraint systems, and high tech adaptive driving aids.

Malley Industries was the first vehicle modifier in Canada to have attained two certifications for adaptive mobility vehicle modifications: the Ford Truck Quality Program (FTQP) and the National Mobility Equipment Dealers' Association Quality Assurance Program (QAP).

QUALITY ASSURANCE

Product quality is our top priority. With that in mind, Malley has endeavored to be at the leading edge of certification and standardization. Our quality system is certified to the ISO-9001-2008 standard. Our advanced quality planning activities ensure that each project being considered is subjected to an extensive review prior to entering into a contract for supply. By following this philosophy, we are able to provide prospective customers with the assurance that we will deliver precisely the product desired.
